

Individual reflection Lv6

We have now finished our third sprint and started on our fourth where the design aspect will be of important value. The project is going well, and the customer/stakeholder Linda seems happy with the results so far.

The work this week has involved design and changing the colors of the site to satisfy our stakeholder. I have worked with front-end and coloring of the different pages at the site. We came up with some great ideas, though we agreed on trying to use a gradient instead. Much of the functions have already been implemented and thus we will focus on design. I have been programming in pairs and believe the collaboration is going well. Though my knowledge in the different languages and programs is still mediocre, which means it's difficult and a slow process for me to provide relevant code on my own. I therefore try to contribute where I can and team up with others.

- what do I want to learn or understand better?

Now when the end of the course is near and much of the work on the site is already done, I believe the programming aspect is of less importance. I believe I have learned a lot by coding together with my team members. Looking forward, instead of coding, I'm more interested in the code testing and the design part. How make sure the code quality holds a good standard and how to design a user-friendly site. What colors match and what themes look good. To learn this, I will work together with my team members, discuss and ask what others believe look good.

- how can I help someone else, or the entire team, to learn something new?

Now I can help other group members learn something new by making sure we implement scrum the best way possible and really focus on our customer/stakeholder. To get there I will work together with others and experiment with different themes and colors.

- what is my contribution towards the team's deliveries?

I hope my involvement in the design question will provide relevant and honest opinions which contribute to value for the customer. Furthermore, same as last week, I hope my work as a secretary is well received and I believe our meetings are getting better and better when we stick to protocols and subjects of discussion. I will try to contribute by programming in pairs and giving my ideas and opinions. I will get there this by being active in discussions and trying to have a good communication with my team members.
