

What I want to learn or understand better: I want to learn how to finish a project in the best way to get as much as possible done before deadline and give the external stakeholder as much value from our product as possible. I also want to continue to learn about testing and how we could have done that part of the project differently. More specifically, I want to learn different types of tests in the general case as well as those suitable for our kind of project and how much resources should be spent on them.

How I can help someone else, or the entire team, to learn something new: I want to read about testing in general and what we have time to do now or what we could have done differently earlier which could be valuable to reflect upon the project. I have also started to recall what we have done and could have done differently overall in the project, which could help the rest of the team to move forward in their reflection and realize more difficult insights that could be valuable to come up with.

What my contribution is towards the team's use of Scrum: We have not changed much the last week, so in line with that I have just said that I'm satisfied with the way we are working and don't see anything in particular that we could change now.

What my contribution is towards the team's deliveries: I have been active during meetings and started to keep notes for the final report on our way of working and what we could have done differently throughout the project. I have also been part of the design process and implemented the glass design for a pair of pages on the site.
