

Individual reflection Lv5

We have now finished our second sprint and are working at a good pace with the project which is progressing as planned. The customer Linda seems happy with our work and new ideas are constantly brought to the table by Linda herself and our group members. We have a bit of freedom when it comes to the design and functions of the page, Linda is happy with many of our ideas, and we are allowed to come up with some new features if we want.

This week the deadline for the Kandidatarbete is approaching and I have not been able to put as much time into the coding process as I wanted. Therefore, contrary to last week, the coding aspect seems a bit tougher and I haven't learned as much as I hoped. Thou I feel like the project is moving forward as planned and we have good communication and dialog in our group.

- what do I want to learn or understand better?

Now I understand certain things a lot better and the environment and coding is getting easier to understand. Same as last week thou, the coding is an important aspect I would like to improve. I would like to understand the React and Java Script Syntax better. This is important in order to be able to write code and understand written code better on my own. To succeed in this, I will have to continue do coding in pairs and continue ask questions. Thou, I need to spend more time learning the syntax on my own.

- how can I help someone else, or the entire team, to learn something new?

This hasn't changed since last week either. I believe I can make the team learn something new by trying to make sure we are implementing scrum and working agile. I can get there by being active and engage during the meetings in order to ensure that we proceed and work systematically. I hope to contribute with keeping the meetings structured and focused on actual topics in order to keep things structured.

- what is my contribution towards the team's deliveries?

My contribution towards the deliveries consists of pair programming, meeting notes and active participation in the team reflections. I hope my work as a secretary is well received and I believe our meetings are getting better and better when we stick to protocols and subjects of discussion. Before, some meetings where not actual meetings, instead just regular coding- or working-time where everyone were connected to discord.

As last week, my contribution to the team deliveries will probably be lower coding wise, and more focused on the process, discussing ideas and collaborating with others. However, I will try to contribute by programming in pairs and giving my ideas and opinions. I would like to be able to start do more coding on my own, which has been difficult. This is still much due to the fact that my skill, knowledge and experience do not match my team members. In order to change this, I should spend more time learning on my own. However, I would like the time

Anton Johansson

2021-04-30

I spend to be devoted to the progress of the project, and therefore programming in pairs might be more time efficient for me and the entire the group.
