

What I want to learn or understand better: I want to be better at knowing when I need to take a step back and learn something thoroughly like taking an introduction tutorial to React compared to just look something up on stack overflow or alike, to learn as much as possible while being productive. I also want to learn how to get criticism from the external stakeholder even when they communicate they are generally happy with what they see.

How I can help someone else, or the entire team, to learn something new: I can continue to help the team to coordinate and to structure our work both in meetings and programming. I always do my best to contribute to our discussions on design and workflow when that is in question. I can also help others to understand the code I have been part of. Forward I am focused on commenting code which has not been commented enough, and that way I can make it easier for the team to understand our code and to structure it, plus presenting it to our supervisor.

What my contribution is towards the team's use of Scrum: I have been part of all weekly meetings as usual, but since we did not make any big changes this sprint since we was quite satisfied with the last one I did not come up with anything new except a reflection on how to learn things which had to do with when to use more time for learning (like tutorials). We have also continued to structure our Trello board as clear as possible, which means we have not had to go back during the week to change user stories etc.

What my contribution is towards the team's deliveries: I have been doing the React and CSS for our FAQ-page and FAQ-admin page which means they are done to the same extent as most of our other pages, just final design work to be done still. That together with meetings took me the week's 20 hrs of work.
