

Individual reflection week 1

This week we have created our group which consist of four IT-students and two I-students. We have found a stakeholder and started with the project by creating a group contract and discussing how we will move forward.

As of now, my knowledge in how to setup programming environments and coding in languages other than sql and java is very limited. Furthermore, I know very little about how you make something that is fully functional and useful on your own from scratch.

What I would like to understand better is the process of starting with an idea and creating a functional product from scratch according to that idea. I believe this will give me knowledge and experience about collaboration, project scope and working with customers which will be useful in future projects and my future career. What I specifically want to learn about is scrum and the other main themes of this course. In addition, how to set up a platform and programming environment will be a useful experience and most of all something which will increase my confidence when it comes to software development. In order to get there, I will have to put much time into reading and learning, while at the same time asking a lot of questions to my team members.

As a student from the I-program, I hope to help with what I have learnt during my years as a student and contribute with a holistic perspective and a critical perspective. My contribution to the teams uses of scrum will therefore be to try to use my knowledge in different areas and support the group's performance by making sure we use the framework and work according to our goals and the customers wishes. My contribution to the team deliveries will be to, as mentioned, see the whole perspective and try to come up with ideas to work towards. Since software development and coding isn't my strength, I will try to do my best in these areas while trying to contribute more to the collaboration and value-adding perspective. In order to succeed, I will try to be as active as possible during our meetings and giving my inputs and thoughts.
