Individual reflection Lv7

We have now finished our fourth sprint and started on our fifth where the design aspect will continue to be of important value. The project is going well, and the customer/stakeholder Linda seems happy with the results so far, especially with our new design and coloring.

The work this week has also involved design and changing the colors of the site to satisfy our stakeholder. The Kandidatarbete has required much time this week, due to final submissions and the project has therefore not been put the highest priority. Thou I feel like we are near our goal and the rest of the work is finishes and design aspects which won't require as much time. My knowledge in the different languages and programs is still mediocre, which means it's difficult and a slow process for me to provide relevant code on my own. I therefore try to contribute where I can and team up with others when writing code. When we are near our goal and much of the functional work is done, I feel like the meetings and discussions will be the most important part in order to deliver a valuable product to the customer in the future process.

- what do I want to learn or understand better?

Now when the end of the course is near and much of the work on the project is already done, I believe the programming aspect is of less importance. Instead, we are more interested in the code testing and the design part. How to make sure the code quality holds a good standard and how to design a user-friendly site. What colors match and what themes look good. The use of gradients, glas and bubbles has been successful so far and I´m looking forward of seeing the final product. In order learn in this area I will need to be curious, asking questions and participating actively in the meetings.

- how can I help someone else, or the entire team, to learn something new?

The learning process has been more of an exchange with me more of the learning coding aspect from the other group members and hopefully me teaching and contributing by making sure we take notes and have proper discussions to certain topics while implementing scrum as well as possible. The coming week I would like to make sure we get the design right and really receive the right information from our stakeholder. Therefore, I will make sure we look back at our notes from the previous meeting with our stakeholder and discuss what she and the end users will value.

- what is my contribution towards the team's deliveries?

I hope my involvement in the design question will provide relevant and honest opinions which contribute to value for the customer. Furthermore, same as last week, I hope my work as a secretary is well received. I will try to contribute by programming in pairs and giving my ideas and opinions. Thou it has been difficult to put as much time and effort into this as I would like to, due to a rough time with the kandidatarbete. Lastly, we will soon begin working on our final report, and I believe I can have good input related to the process and

what could have been changed. To get there, being active during the meetings will also be valuable.
